

depSNORT

Dependency supply-chain scan report

dev - static, zero-execution analysis

INCOMPLETE - no findings, but degraded data source(s): osv. This is NOT an all-clear. Exit 0.

SCOPE

Root: pkg:pypi/pinned-scan-dir@0.0.0

Graph: 17 nodes (10 packages, 7 install hooks, 0 referenced artifacts, 0 sinks), 16 edges

Findings: 0 block, 0 gate-eligible, 0 advisory (0 total)

RESOLUTION COVERAGE

Flat resolution (pypi): this lockfile format records no inter-package relationships, so those packages resolve at depth 1 by construction, not by fact. Transitive structure is unavailable for them and the depth column below should not be read as a dependency tree.

Data source(s) degraded (osv): advisories or release history were unavailable for some coordinates, so vulnerability and temporal checks are a lower bound over them.

DATA SOURCE COVERAGE

osv online - queried 9, cache 0, network 0, advisories 0, gaps 9

Coverage is incomplete: 9 coordinate(s) returned no data. Findings below are a lower bound.

Error: osv: querybatch: Post "https://api.osv.dev/v1/querybatch": Forbidden

npm-registry online - queried 0, cache 0, network 0, advisories 0, gaps 0

pypi-registry online - queried 9, cache 9, network 0, advisories 0, gaps 0

rubygems-registry online - queried 0, cache 0, network 0, advisories 0, gaps 0

cargo-registry online - queried 0, cache 0, network 0, advisories 0, gaps 0

composer-registry online - queried 0, cache 0, network 0, advisories 0, gaps 0

nuget-registry online - queried 0, cache 0, network 0, advisories 0, gaps 0

FINDINGS

No findings. Every resolved package was clean against the enabled checks and data sources.

PACKAGE RISK

No package carries a risk state: all 10 resolved packages are clean.

depSNORT performs static analysis only: it parses manifests and lockfiles and never runs a package manager or executes a lifecycle hook. It detects capability and indirection, not payload semantics. Advisory findings never affect the exit code; gate-eligible findings do so only when the run opts in; block findings always fail.

Report output is deterministic (no embedded timestamp).
